

Lyndon Yang

714-386-2258 | lyndonyang2005@berkeley.edu | [linkedin.com/in/lyndon](https://www.linkedin.com/in/lyndon)

TECHNICAL SKILLS

Languages: Java, Python, C/C++, SQL (PostgreSQL), JavaScript, HTML/CSS, React, Scheme
Developer Tools: Git, GitHub, VSCode, Visual Studio, PyCharm, IntelliJ IDEA
Libraries: TensorFlow, Keras, PyTorch, Scikit-Learn, Pandas, NumPy, Matplotlib, Seaborn, OS

EDUCATION

UC Berkeley, College of Engineering

Berkeley, CA

Bachelor of Science in Electrical Engineering and Computer Science

Expected May 2026

- GPA: 4.00
- Honors: Eta Kappa Nu, Tau Beta Pi
- Relevant Coursework: The Structure and Interpretation of Computer Programs, Data Structures, Discrete Mathematics and Probability Theory, Designing Information Devices and Systems I & II, Linear Algebra & Differential Equations, Computer Architecture, Computer Security, Efficient Algorithms

EXPERIENCE

University of California, Santa Barbara

June 2022 – August 2022

Research Intern under Professor Ryan Solgi - Summer Research Academy

Santa Barbara, CA

- Researched AI applications for detecting Coronary Artery Disease (CAD) risks using both non-intrusive and intrusive medical data
- Developed a robust data pipeline, trained and fine-tuned various machine and deep learning models, including LR, KNN, SVM, RF, and FNN
- Achieved a recall score of 83.33% and an AUC of ROC score of 94.90%.
- Published a 10-page research paper and presented at a formal capstone seminar

University of California, Los Angeles

June 2021 – August 2021

Research Intern

Virtual

- Explored ML applications for stroke patient analysis
- Implemented and tuned machine learning models, including LR, KNN, and SVM
- Achieved recall score of 86.8% and AUC of ROC score of 85.7%
- Presented at a course project seminar and was nominated for best course project among 18 teams

PROJECTS

Breast Cancer Ultrasound AI | Python, PyTorch, TensorFlow, Keras, Streamlit

2024

- Developed an image segmentation and classification algorithm to detect breast cancer from ultrasound images using deep learning and computer vision
- Implemented a custom DeepLabV3+ with ResNet50 backbone for generating masks and fine-tuned ResNet101 for classification
- Created a multi-model pipeline that generates overlaid mask images with DeepLabV3+ and performs predictions on the outputs with ResNet101
- Deployed the final model on a web app built with Streamlit, achieving a testing accuracy of 98%

Quantitative Ensemble Cancer Detection | Python, TensorFlow, Scikit-Learn, XGBoost

2024

- Applied AI with ensemble learning to classify tumors based on numerical data
- Trained and tested over ten machine learning models, including LR, SVM, KNN, RF, XGBoost, NB, DT, GB, AB, ET, DNN
- Applied ensemble and stacking techniques to improve model performance
- Achieved an average accuracy of 97.37%, precision of 97.61%, recall of 95.35%, and F1 score of 96.47%
